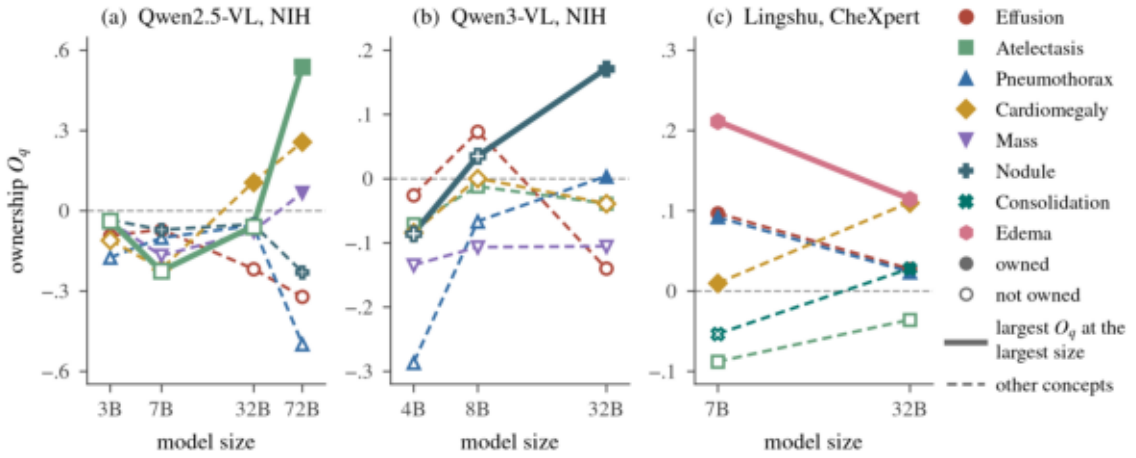

Figure 6 — candidate C: portrait panels, key at the right

RESHAPED. The three rows of legend under the panels took the bottom third and left each ladder 1.3 in of height against 2.1 in of width. The key moves into a fourth slot, the panels take the whole height and turn portrait, and the figure is 2.72 in instead of 3.39 in. One y scale per panel.

`fig6-C-portrait.pdf  6.32 x 2.72 in  (455 x 196 pt)  shown at true size`

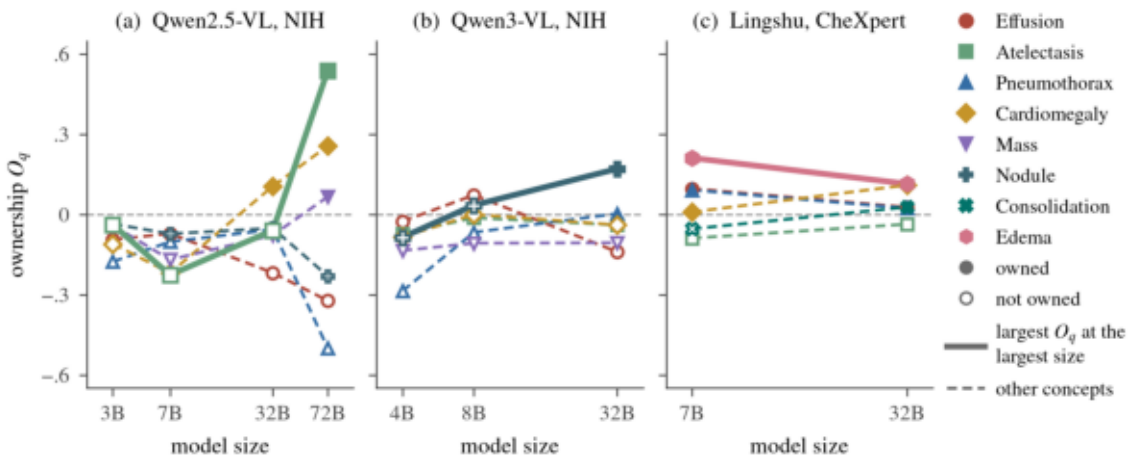

ACL text width 455 pt

Figure 6 — candidate D: portrait panels, one y scale

RESHAPED, and all three ladders on one scale. The panels are wider because (b) and (c) no longer carry their own y ticks, and the comparison across panels becomes honest: the chest effects really are a fraction of the Qwen2.5-VL rise.
